INTRODUCTION

Traffic counts are conducted to collect information about the movement of people and vehicles across specific points along a given roadway. This information is often used as the basis for transportation planning studies, but has a wide variety of applications and uses. Traffic volumes can be used to evaluate the current performance characteristics of existing roadway segments, identify the need for additional transportation facilities to reduce existing congestion and gridlock, and as a gage of the effectiveness of new businesses that rely on pass-by traffic (i.e. convenience stores, gas stations, and retail establishments). By far, the most important use of daily traffic count information is to identify trends in traffic volumes to assist in the development of seasonal adjustment factors and future growth rates. This information is used as the building blocks for future traffic projections used in transportation planning studies.

The Pioneer Valley Planning Commission (PVPC) collects daily traffic count information at sample locations across the 43 cities and towns in Hampden and Hampshire Counties under contract with the Massachusetts Highway Department (Mass Highway). Mass Highway requests specific traffic count locations each year. Additional counts are conducted for member communities on an as requested basis and for private businesses for a nominal fee. The PVPC also selects its own traffic count locations to supplement data collection activities required as part of ongoing corridor studies, the regional congestion management system, the regional pavement management system, and the regional transportation model.

DATA FORMAT

The following example shows the format in which the traffic count data is presented:

Traffic Counts for Agawam

Station	Facility	Location	Route	1992...
2196	Main St.	S/O Rte. 57	159	13,000
2200	Rte. 57	E/O Rte. 75	57	24,000
8303	Rte. 5	Over Rte. 57	5	24,000

A *station* number is assigned to each count location by the Mass Highway and PVPC. Station numbers beginning with a 1, 2, or 3 are counts requested by and performed for Mass Highway. Station numbers beginning with a 4 or a 5 are locations counted by a member community, and station numbers beginning with a 7, 8, or 9 are locations selected by the PVPC.

Facility identifies the street or roadway name on which the counter was placed, and *location* identifies the traffic counter's location in relation to the nearest cross street or political boundary. The *route* is the state or federally designated highway number of the facility, if applicable. Finally, the actual, unadjusted traffic count is listed by the *year(s)* in which it was performed. However, traffic counts performed by Mass Highway are presented in this document as adjusted volumes. On two-way roadways, the traffic count volume consists of the total of both directions of travel.

In addition the following abbreviations are used:

N/O:	North of	T.L.:	Town Line
S/O:	South of	C.L.:	City Line
E/O:	East of	S.L.:	State Line
W/O:	West of	btw:	between

SEASONAL ADJUSTMENT FACTORS

Traffic counts conducted as part of this book were performed for a minimum of 48 hours on a weekday during the months of March - November. The traffic volumes presented represent seasonal average daily traffic (SADT) and have been left in their raw, unadjusted form. The Mass Highway develops statewide adjustment factors based on the functional classification of the roadway which are shown in Table 1. Due to the seasonal nature of PVPC's traffic counting program, the counts represented in this document can be expected to have some margin of error. The user is strongly encouraged to collect new traffic count data whenever possible for use in planning applications.

source: Massachusetts Highway Department 1994

All traffic count information for the Interstate Highway System, i.e. (I-91, I-291, I-391, and I-90) was collected by Mass Highway and has been factored to reflect average monthly conditions.

REGIONAL GROWTH RATES

Mass Highway currently collects data at four permanent traffic count stations in the Pioneer Valley Region. In addition, partial information was also available for three count stations between 1990 and 1996. These permanent count locations are shown in Table 2.

By examining the change in traffic volumes at the permanent count stations, information can be developed on the amount of growth occurring at specific locations throughout the region. Locations have been grouped by the functional classification of the roadway and plotted on graphs in Figures 1 through 3. The functional classification of the roadway is an indication of the type and amount of traffic a roadway is expected to serve.

Table 2
Mass Highway Permanent Count Stations in the Pioneer Valley

<u>Community</u>	<u>Roadway</u>	<u>Location</u>	<u>Years Available</u>
Longmeadow	I-91	south of the Springfield City Line	1990-1996
Springfield	I-291	south of Roosevelt Avenue	1990-1994
Chicopee	I-391	south of I-90 at Route 116	1990-1993, 1995, 1996
Chicopee	I-391	north of I-90	1990, 1993, 1994, 1996
Northampton	Route 5/10	south of the Hatfield Town Line	1990-1995
West Springfield	Route 5	at the Holyoke City Line	1990-1993, 1996
Huntington	Route 112	south of Route 66/112	1990-1992, 1995, 1996

Source: Massachusetts Highway Department

Figure 1 shows the change in traffic volumes at four Mass Highway count stations in the PVPC region. All four locations follow the same general trend. Traffic decreased at three of the four locations from 1990 to 1991 and then steadily increased over the next four years. Based on the results of these counts, traffic volumes on the interstate roadways in the PVPC region have increased by an average of 1.21% per year from 1990 to 1996.

The two Mass Highway count stations shown in Figure 2 experienced opposite trends. Traffic on Routes 5/10 south of the Hatfield Town Line in Northampton very closely mirrors the growth pattern of the interstate roadways in the PVPC region. This location experienced a sharp decline in traffic volumes from 1990 to 1991, and from 1995 to 1996, and traffic steadily increased from 1991 to 1995 for an overall growth rate of 9.2%. From 1991 to 1996 traffic has increased at an average of 3.1% per year at this station.

Conversely, traffic on Route 5 at the Holyoke City Line in West Springfield has steadily decreased from 1990 to 1993 at an average of 2.5% per year. It is not uncommon for roadways to experience a decline in traffic volume in response to changes in population and land uses in the area. From 1993 to 1996 the traffic volume on this particular arterial roadway has increased by almost 10%. This data should be used with extreme caution due to the very small sample size and large variation in trends at these two locations.

The annual change in traffic volumes on Route 112 south of Route 66/112 in Huntington is shown on Figure 3. Traffic on this roadway has steadily increased by an average of 2% per year from 1990 to 1992 and by 4.7% per year from 1995 to 1996. Again this data should be used with extreme caution due to the small sample size of rural roadways for the PVPC region. The user is encouraged to collect additional traffic count information to verify trends whenever possible.

NON-MOTORIZED COUNTS

The Pioneer Valley Planning Commission began collecting volume counts on the Norwottuck Rail Trail in July of 1996. The Norwottuck Rail Trail is managed by the Department of Environmental Management, and is one of two paved rail-trails in the region. The 8 foot trail follows a former railroad right of way for ten miles through the communities of Northampton, Hadley, Amherst, and Belchertown. In addition to being a popular recreation facility, the trail provides bicycle commuters with an alternative to the heavily traveled segment of Route 9 in Hadley.

Table 3
Non-Motorized Counts
On the Norwottuck Rail Trail
 Between West Street and Middle Street(Rte. 47), Hadley

Dates	Days of the Week	Average Daily Volume
7/26/96 - 7/28/96	Friday 10:00am - Sunday 11:59pm	1,109
8/2/96 - 8/4/96	Friday 9:00am - Sunday 7:00pm	1,058
8/9/96 - 8/11/96	Thursday 9:00pm - Sunday 11:59pm	688
8/15/96 - 8/18/96	Thursday 6:00pm - Sunday 11:59pm	1,146
7/22/97 - 7/27/97	Tuesday 6:00pm - Sunday 11:59pm	929
7/28/97 - 7/29/97	Monday 12:00am - Tuesday 8:00pm	802
8/2/97 - 8/3/97	Saturday 9:00am - Sunday 11:59pm	1,183
8/4/97 - 8/10/97	Monday 12:00am - Sunday 11:59pm	910
8/11/97 - 8/14/97	Monday 12:00am - Thursday 5:00pm	626
9/10/97 - 9/14/97	Wednesday 9:00am - Sunday 11:59am	824
9/17/97 - 9/21/97	Wednesday 5:00pm - Sunday 11:59pm	732
10/28/97 - 11/2/97	Wednesday 3:00pm - Sunday 11:59pm	243
11/3/97 - 11/9/97	Monday 12:00am - Sunday 11:59pm	148
11/10/97 - 11/13/97	Monday 12:00am - Thursday 8:00pm	137

Source: PVPC

The volume counts provide transportation engineers and planners with useful information for designing new bikepath facilities. Fifteen minute interval counts provide data for gap studies and the timing and coordination of pedestrian cycles in timing of traffic signals. The counts provide trip generation data for calculating parking requirements and establishing appropriate design widths. Volume data from the Norwottuck Rail Trail has already influenced the design width and

intersection design of future projects in the region, including the; Amherst-UMass Bikeway Connector, Connecticut River Walk and Bikeway, Manhan Rail Trail, and Redstone Bikepath.

In addition to volume counts, PVPC has compiled a profile of users on the Norwottuck Rail Trail. The report entitled, “ A Survey of Users on the Norwottuck Rail Trail” profiles characteristics of users on the trail, including; peak hour volumes, origin/destination, mode splits, trip purpose, and vehicle occupancy rates.

In the future, PVPC is planning to collect additional volume counts on the Norwottuck Rail Trail and the Northampton Bikepath to establish a profile of the seasonal fluctuation of uses and to update the comprehensive survey conducted in 1996. The Department of Environmental Management currently has plans to extend the Norwottuck from its current terminus on the outskirts of Northampton into the heart of the city’s residential and business district. Plans are currently underway to connect the Norwottuck Rail Trail to the University of Massachusetts parallel to University Drive. These projects, in combination with a major bridge reconstruction project on Route 9, will increase the roll of the Norwottuck Rail Trail as a commuter facility. The PVPC trail traffic counting program will monitor the impact of these new facilities in the years ahead.

For more detailed volume data from the trail, or for a copy of the Norwottuck Rail Trail Users Survey, please contact the PVPC.

AM & PM PEAK HOUR VOLUMES

Table 4 shows peak hour volumes by direction for each count location during the 1997 count season. The actual peak hour time is not shown, however it can be obtained by contacting the PVPC.

AUTOMATIC TRAFFIC RECORDER DATA SHEET

Figure 4 illustrates an example of a raw traffic count. The figure shows volumes at every hour for each direction, including totals for each day, throughout the count period. Also shown is the week average, daily percent of the average by direction, daily peak hours, and the week average peak hours. Volumes in different formats are available by contacting the PVPC.

TRAFFIC COUNT SERVICES

This report contains a sampling of the data maintained by the Pioneer Valley Planning Commission. Additional statistics, as well as other traffic indicators such as peak hour, turning movement counts, travel speed studies, accident reports, vehicle classification counts, and pedestrian and bicycle counts are available by contacting the Pioneer Valley Planning Commission.

PVPC offers public and private organizations a reliable traffic counting service with state of the art monitoring equipment and traffic analysis capabilities. For more information, or to inquire about transportation, land use, demographic, mapping and economic data services and products, please contact:
